DECONTAMINATION/STAGING SITE ASSESSMENT

Facility Name :	Cocodrie	Facility Location ID:	CocW01
Assessment Date :	8/17/2010	Incident Name :	BP Spill
Physical Location :	Cocodrie Marina 106 Pier 56		
City, State :	Chauvin, LA	County :	Terrebone

ASSESSMENT INFORMATION

General Site Information and Observations	
1. All waste stored in lined rolloff boxes?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
2. Rolloff boxes covered after filled (or end of day)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
3. Any evidence of oily waste or oily waste waters?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
4. If yes, was it adequately addressed?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A
5. How many samples were collected?	2

Additional Comments :

WASR arrived at 0849 hours and met with BP waste disposal contractors from Heritage Environmental, a representative from Environmental Standards, and a representative from SEMS (representing Pace). Heritage indicated that there were 12 rolloffs onsite: 8 containing stored boom (non-oiled), 3 were empty, and one contained some bags of oiled boom and used PPE. Heritage indicated that there are 3 frac tanks on site: one containing BP (decon) wastes onsite, one was empty, and one contained seawater as ballast. During the inspection, all rolloffs were covered, except during active loading. Frac tanks were located within secondary containments, and the containments had been recently vacuumed out. WASR noted that the frac tanks lids were open, and asked Heritage regarding their normal state. Heritage indicated that covers were typically closed, and verified closed at the end of all shifts; Heritage closed all frac tank lids at 1110. Heritage was shutting down operations for the approaching storm anticipated overnight and tomorrow.

WASR collected one liquid waste sample (FouW01-100815-WL-001-1) from frac tank 259907 at 1000 hours. The frac tank contained approximately 6' of liquid, with approximately 0.5" of oil floating over the remaining volume of aqueous liquids. WASR collected samples using a Sludge Judge, with VOC-TCLP samples being collected as grabs, and SVOC-TCLP, RCRA Metals-TCLP, and Ignitability being collected as composites. Samples were wiped down, bagged and placed on ice. Split samples were provided to BP's environmental contractor. PPE and wastes were bagged and disposed of in a rolloff.

At 1020 WASR collected one bag of soiled boom and one bag of used PPE from rolloff. Sample CocW01-100816-WS-001-1 was collected at 1115, with VOC-TCLP samples being collected as grabs, and SVOC-TCLP, RCRA Metals-TCLP, and Paint Filter being collected as composites. Samples were wiped down, bagged and placed on ice. Split samples were provided to BP's environmental contractor. PPE and wastes were bagged and disposed of in a rolloff.
